

G-One Series: Gravel goes tubeless, now also in Performance Line. (Photo: Schwalbe)

## Gravel without limits:

### G-One Ultrabite

Ultrabite is the new addition to the G-One family of four – and the name says it all: With an aggressive off-road tread, it literally bites into the ground. Compact cassette twin knobs throughout the middle of the tread ensure full grip and excellent traction, while robust side blocks give the rider a sense of security when cornering. The stable construction with the most recent Tubeless Easy Technology (TLE) and versatile Addix Speedgrip Compound noticeably increase off-road performance in all parameters. In widths 40 mm (1.50 inch) and 50 mm (2.00 inch), the G-One Ultrabite is ideal for riding on gravel roads, forest roads and trails, even in challenging conditions.

Schwalbe's new off-road specialist also performs very well as a front tire in combination with G-One Bite or G-One Allround on the rear wheel. Thanks to TLE-technology, all G-One Ultrabite versions can be ridden tubeless. Sizes: 40-622 (28 x 1.50), 50-622 (29 x 2.00) each available in Evolution and Performance Line.

#### **Upgrade for the Performance Line: Now with Tubeless Easy-Technology**

With new products for gravel, Schwalbe has put a significant amount of effort into strengthening its Performance Line: The G-One Allround rolls off the rack in the new sizes 57-584 (27.5 x 2.25) and 57-622 (29 x 2.25). And the G-One Bite, size 40-622 (28 x 1.50), as well as the G-One Allround in 35-622 (28 x 1.35) and 40-622 (28 x 1.50) now come with a

Tubeless Easy carcass in Classic-Skin. Peter Krischio, Schwalbe Product Manager Race takes us through the new versions: “The potential of a tire for gravel can only be fully exploited as a tubeless version. Thanks to well thought-out Tubeless Easy Technology, this is now also possible in the Performance Line.”
